For EMS and Social Work credit: Complete the evaluation in the MI-TRAIN system. For CME credits: Complete the evaluation in the WMU system. Additional instructions will be provided at the conference.

Agenda is subject to change

Are you Ready?

Considerations need to be taken to ensure preparedness and response to receive, assess, stabilize and safely transfer children when the situation requires.

- Pediatrics (age 0-17) make up 73.7 million or 24% of the U.S. population. In Michigan, 21.8% or 2.2 million of the residents are children.
- There were more than 139 million Emergency Department (ED) visits in the United States in 2017. Approximately 27.8 million or 20% of those were children younger than 18 years old.

Objectives:

1. Increase the existing levels of planning and capacity of pediatric preparedness for healthcare professionals.
2. Describe comprehensive pediatric preparedness and identify the value during an emergency incident.
3. Demonstrate a coordinated, regionalized, accountable system that provides immediate and appropriate care.
4. Identify existing gaps and challenges faced in pediatric psychological/behavioral health.
